

# Technologies Survey

Ahmed Fayeze

18/09/2024

# OUTLINE

---

- Executive Summary
- Introduction
- Methodology
- Results
  - Visualization – Charts
  - Dashboard
- Discussion
  - Findings & Implications
- Conclusion

# EXECUTIVE SUMMARY

---

- Survey findings reveal
  - Most used programming language is JavaScript
  - Most used database is MySQL
  - Most used web framework is jQuery
- Future learning interests
  - Top programming language professionals plan to learn is JavaScript
  - Significant interest in learning new frameworks and databases
- Most of the respondents were men
- Most of the respondents were young from 22 to 32

# INTRODUCTION

---

- The tech industry is constantly evolving, making it essential to stay updated on the latest tools
- Our survey was conducted to understand
  - The commonly used programming languages, databases, and web frameworks
  - The tools professionals plan to learn in the upcoming year
- The goal of this presentation is to analyze these trends and provide insights on current and future tool preferences

# METHODOLOGY

---

- Data collection
  - Survey data was collected from 11398 respondents
  - The survey included questions on the most used programming languages, databases, web frameworks, and future learning interests
- Data storage
  - The collected responses were stored in Excel spreadsheets.
- Data analysis
  - Used descriptive analytics to summarize the data
  - Created visualizations (e.g., bar charts, pie charts) to represent key findings
- Tools used
  - Excel for data storage and initial analysis
  - IBM Cognos Analytics for visualization

# RESULTS

---

# PROGRAMMING LANGUAGE TRENDS

## Current Year

Top 10 Language Worked With

## Next Year

Top 10 Languages Desired Next Year

# PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- JavaScript leads the list of programming languages people want to learn next year, with 6,630 respondents
- HTML/CSS and Python are also highly desired, with over 5,000 respondents each showing interest
- JavaScript is the most worked-with language, with 8,687 respondents, showing its dominance in both current usage and future learning goals
- HTML/CSS and SQL are also highly used by professionals

## Implications

- JavaScript remains a key skill for the future, with high demand for learning it, indicating its continued relevance in web development and beyond
- The high interest in HTML/CSS suggests that front-end development skills are still highly sought after, even as frameworks become more complex
- JavaScript's dominance in both current usage and future demand implies that it will continue to be a key language for professionals
- HTML/CSS and SQL being commonly worked with confirms their foundational roles in both front-end development and database management

# DATABASE TRENDS

## Current Year

Top 10 Database Worked With

## Next Year

Top 10 Databases Desired Next Year

# DATABASE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- MySQL is the most widely used database, indicating its popularity and versatility across various applications
- SQL databases, such as MySQL, PostgreSQL, Microsoft SQL Server, and SQLite, occupy the top positions, demonstrating their continued relevance in enterprise environments
- PostgreSQL is the most desired database for the next year, indicating its strong popularity and potential for continued growth
- MongoDB and Redis, both NoSQL databases, rank high, suggesting a growing preference for flexible and scalable data storage solutions

## Implications

- MySQL's dominance suggests that its open-source nature, robust features, and widespread adoption will likely continue to drive its popularity
- The prevalence of SQL databases underscores their importance in enterprise applications, particularly for structured data and transactional workloads
- PostgreSQL's dominance suggests that its open-source nature, robust features, and strong community support will continue to drive its adoption
- The popularity of MongoDB and Redis highlights the increasing need for flexible and scalable data models to accommodate modern application requirements

# DASHBOARD

---

[https://github.com/ahmed-fayez-abdalla/IBM\\_Project](https://github.com/ahmed-fayez-abdalla/IBM_Project)

# DASHBOARD TAB 1

Top 10 Language Worked With

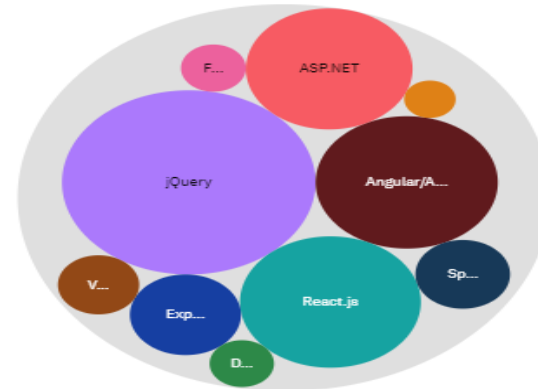

Top 10 Database Worked With

Platform Worked With

Top 10 Web Frames Worked With

# DASHBOARD TAB 2

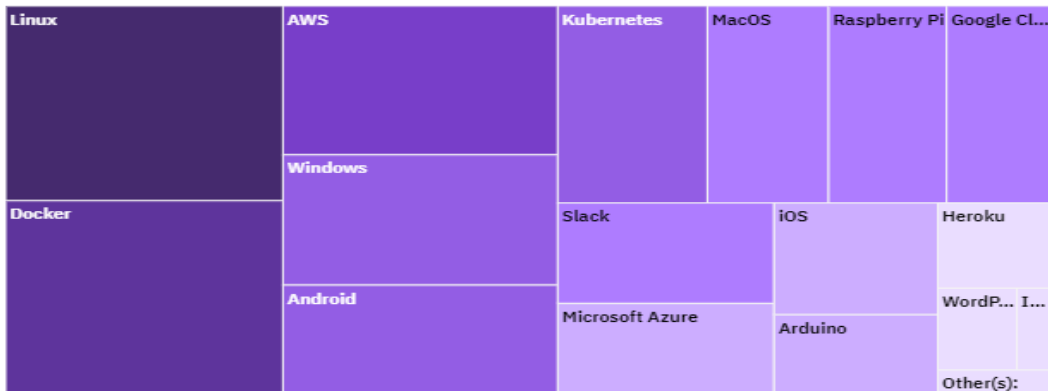

Top 10 Languages Desired Next Year

Top 10 Databases Desired Next Year

Count Of Platform Desire Next Year

Top 10 Web Frame Desired Next Year

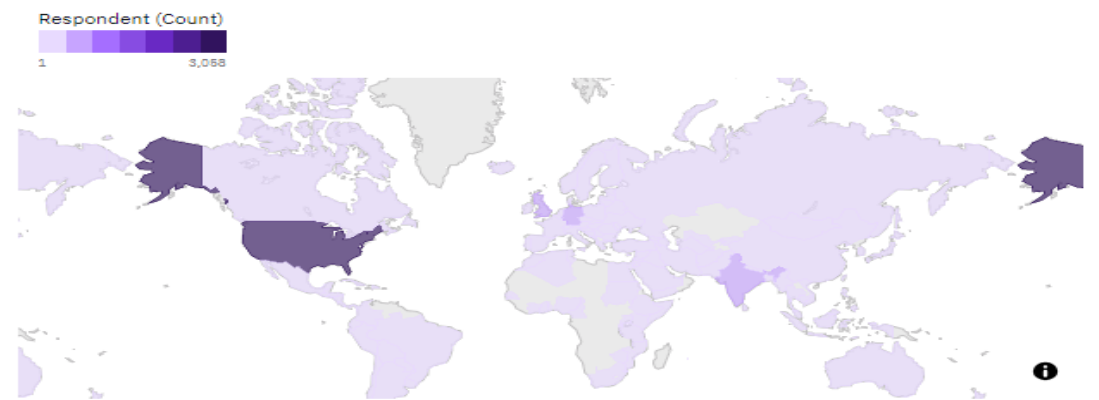

# DASHBOARD TAB 3

Count Of Respondents By Gender

Count Of Respondents By Country

Respondents By Age

Count Of Gender Respondents Separated By Education Level

# DISCUSSION

---

- In this section we will discuss overall findings and implications about the charts derived from the two data files

# OVERALL FINDINGS & IMPLICATIONS

---

## Findings

- The commonly used languages are JavaScript, HTML/CSS, SQL, Python, and Java. JavaScript leads with 8,687 users, followed by HTML/CSS with 7,830 users
- MySQL, PostgreSQL, and Microsoft SQL Server are the top databases in use, with MySQL being the most popular
- AWS, Linux, and IBM Cloud or Watson are the leading platforms, indicating a strong preference for cloud-based and open-source solutions
- React.js, Angular, and ASP.NET are the top web frameworks, with React.js being the most widely used

## Implications

- There is a strong interest in learning Python, which suggests that educational programs and training should focus on this language to meet demand
- The high usage of JavaScript and React.js suggests that front-end development skills are in high demand
- The gender disparity in the respondents indicates a need for initiatives to encourage more women to enter and stay in the technology field
- Understanding the educational background of respondents can help tailor educational content to different levels of expertise

# CONCLUSION

---

- JavaScript, Python, and cloud platforms like AWS are highly prevalent in both current usage and future interest
- There is a significant demand for learning Python and cloud technologies, suggesting a need for targeted educational programs
- Front-end development skills, particularly in JavaScript and React.js, are in high demand
- Relational database management skills are crucial, with MySQL and PostgreSQL being widely used
- The gender disparity among respondents highlights the need for initiatives to encourage more women to enter and remain in the tech industry

# JOB POSTINGS

In Module 1 you have collected the job posting data using Job API in a file named “job-postings.xlsx”. Present that data using a bar chart here. Order the bar chart in the descending order of the number of job postings.

# POPULAR LANGUAGES

In Module 1 you have collected the job postings data using web scraping in a file named “popular-languages.csv”. Present that data using a bar chart here. Order the bar chart in the descending order of salary.
